

A low-cost, out-of-the-box solution

Kerite Preassembled Aerial cable is an easy and inexpensive method for running open wire circuits under a bridge and a lower-cost alternative for underground feeders and circuits.

Kerite's Preassembled Aerial cable comes completely assembled on the reel, with 3 conductors tri-plexed and wrapped with a strap to a copper-clad messenger wire. It's ready to go up on the pole and is used in locations closer to the public; it is completely insulated with no touch potential. It also installs quicker than 3 individual cables on insulators.

- **Conductor** – Compressed or Compact, Three Copper or Aluminum Conductors
- **Conductor Shield** – Nonconducting Permashield® Stress Control Layer
- **Insulation** – Discharge-Resistant EPR Insulation
- **Insulation Shield** – Extruded Free Stripping Semiconducting Layer
- **Metallic Shield** – Copper Tape with Jacket or Cupro Nickel Tape
- **Jacket** – Optional
- **Support** – Copper-Clad Messenger Wire
- **Custom Built**
