

Kerite Cable Services Project Profile

| | |
|--------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Project | Agawam Substation |
| Client | NUSCO |
| Location | Agawam, Massachusetts |
| Cable Design | 115kV, 2000kcmil Cu — High Voltage Cable |
| Length | 600 circuit feet |
| Subcontractors(s) | Central Connecticut Cable Company |
| Scope | Pulled three lengths of cable through an existing duct bank. Performed a 10kV jacket test on each length of cable. Installed six high voltage cable terminations and all required sheath bonding accessories. Upon completion of installation, a final system acceptance test was conducted by KCS technicians. |

Demonstrated ability to safely install termination and cable near energized lines

Completed terminations on 90ft pole
