

BG-9

The BG-9 is a wildlife guard for transformer bushings and other power equipment. It covers the lead wire and connections to block contact by birds and squirrels. It is molded from a proprietary blend of gray, track and UV resistant, polyethylene.

The BG-9 is equipped with horizontal internal supports which provide stability when the guard is mounted over the top skirt of the bushing. The guard is designed with double knockouts for direct-connected surge arresters. It is also designed for installation on energized equipment with live line rubber gloves without removing the lead wire from the bushing connector.

- Prevents outages, improves reliability
- Prevents harm to wildlife
- Installs quickly and easily
- Made in USA
