

# Tactile Phase Marking

## A New Concept in Phase Marking

- Phase marking is indented
- Permanent marking
- UV and water impervious
- Standard ABC phase mark
- Four lines - 90° apart

## Tactile Marking Advantages

- Unlike jacket printing, marking is done at parallel/triplex
- Eliminates mark errors
- Readable from any side

## Tactile Phase Identification

- Each cable has four lines of phase marking - 90° apart
- Phase marking for either parallel or triplex constructions
- LLDPE, CPE, PP, LSZH jackets can be marked
- Sequential footages on all three cables
